INTRODUCTION

Finally, it's here!

The new Highlight catalogue, which contains 353 pages.

HighLight B.V. was founded in 1996 by the Hoogland family, Jack Hoogland and his 2 sons.

Together the 3 of them have over 100 years of experience in the lighting industry.

In 2019 we enjoyed our most successful year in our history, which confirms that we once again made the right choices in our designs.

Our warehouse and offices are located in Weesp, a small town just 15 km away from Amsterdam.

Over 95% of all the items listed in our catalogue are available ex-stock, which enables a fast delivery.

Deliveries inside Holland are (mainly) made with our own trucks to ensure that our products reach our clients in perfect condition.

The products shown in our catalogue are sold to specialist lighting shops, furniture shops and online retailers. All items shown in our catalogue can be found in our showroom in Weesp.

Our main business in the project industry is the supply of custom-made OEM products (custom made).

HighLight is closely co-operating with some of the leading hotel groups in the world.

We have a permanent booth in "De Woonindustrie" (<http://dewoonindustrie.nl>), which is an exhibition centre for the lighting industry as well as furniture.

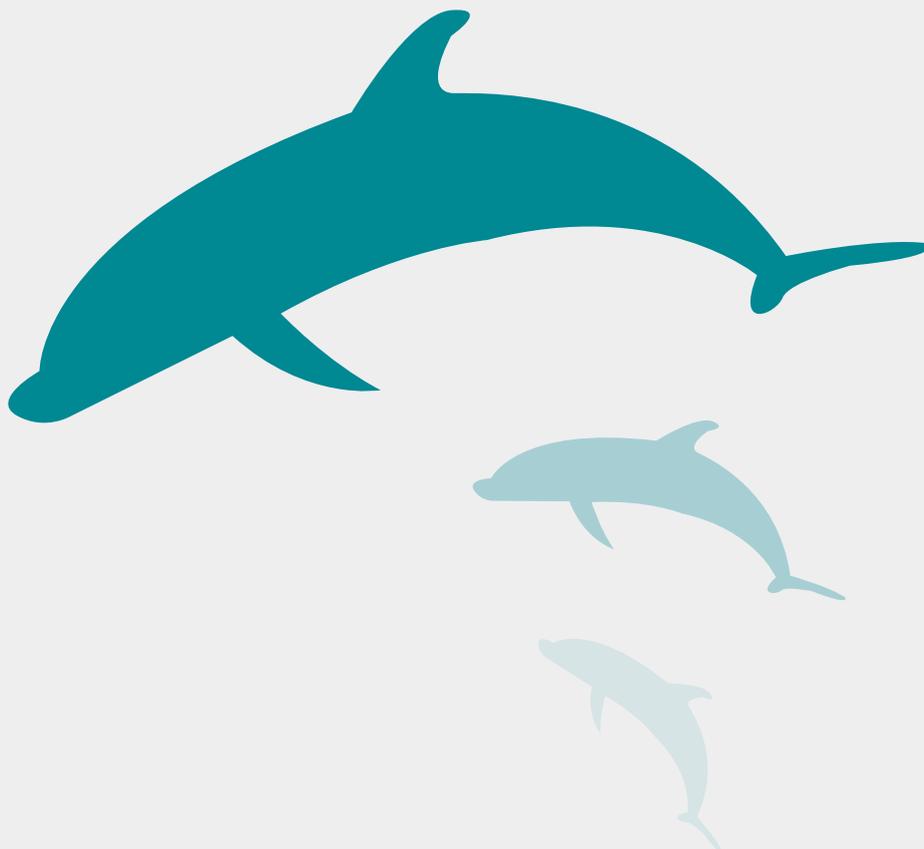

In our booth we present all our new items and a selection of our best-selling products.

We also exhibit at the international "Light & Building" Fair in Frankfurt, Germany, though on our small booth (60m²) we are only able to display some of our new products.

In September each year, Highlight organizes a house fair in Weesp, during which our new products are launched.

We look forward to a fruitful cooperation!

The Hoogland Family

GENERAL INFORMATION

All measurements are indicated in centimetres and are indicated approximately.

Explanation of the measurements:

H = the height of the luminaire, luminaires including shades are measured including shades!

L = the length of the luminaire

W = the width of the luminaire

max. = the maximum height / the maximum wattage of the luminaire.

Our catalogue has been prepared with the utmost care. However in reality the colours as shown in our catalogue can be slightly different, because of the printing procedure.

We reserve the right to make changes in colours and measurements.

Nothing from this catalogue can be copied and / or be published by printing, photocopy, microfilm or in a different way, without a written permission of HighLight B.V.

Explanation of the article numbers:

Every article number starts with a letter, like: G = Glass, H = Pendant, K = Clamp lamp, O = Parts (among other things shades, pendant cords and bars), P = Ceiling light, S = Spot light, T = Table lamp, V = Floor lamp and W = Wall lamp.

Behind this letter there is a 4-digit article number, followed by a 2-digit colour number.

HighLight B.V.

New in our catalogue is mentioning the correct energy label (ERP) with the articles.

With this label the consumer can see at a glance which articles are energy-saving.

Incandescent bulbs, halogen bulbs, energy-saving bulbs, fluorescent bulbs and LED bulbs have a mandatory energy label. The energy label shows the energy sufficiency of a bulb compared to other bulbs.

By using bulbs with the energy label A, A+ and A++, your energy bill will be lower.

For instance, the power consumption of lighting can be reduced to more than halve if you replace widely used incandescent bulbs by energy-saving bulbs and LED bulbs.

Luminaires are increasingly sold with bulbs which are included. For you it is convenient to know which energy class

these included bulbs are and also which bulbs you can use yourself once you have purchased the luminaire.

Therefore an energy label was created also for luminaires. This energy label is mandatory starting from March 2014.

In case you can turn in the (replacement) bulb yourself, the label shows of which energy classes these bulbs can be.

If the energy class is not possible, it is not within the brace.

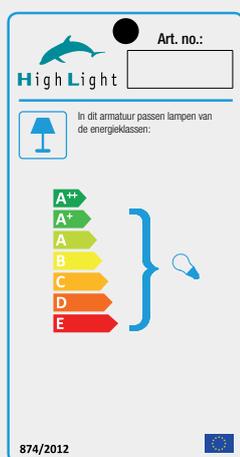

In case of a bulb that is included, you can find the energy class on the energy label on the bottom of this luminaire.

Increasingly more luminaires are supplied with integrated bulbs which are non-replaceable.

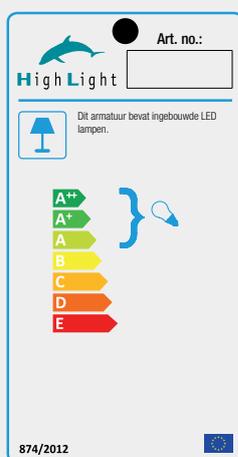

In such case the label shows which energy class these integrated bulbs are and also have a notification that these cannot be replaced.

Below you can find the different ERP labels:
